Progress in Energy and Combustion Science

An International Review Journal

Editor

Professor N. A. Chigier
Department of Mechanical Engineering, Carnegie-Mellon University, Pittsburgh, Pennsylvania 15213, U.S.A.

Editor's Assistant

Eunice Hench

Editorial Advisory Board

Professor A. D'Alessio,
University of Naples, Italy

Dr. E. Bar-Ziv,
Nuclear Research Center—Negev, Israel

Dr. J. Bellan,
JPL, Pasadena, U.S.A.

Professor R. W. Bilger,
University of Sydney, Australia.

Professor C. T. Bowman,
University of Stanford, U.S.A.

Professor D. Bradley,
University of Leeds, U.K.

Professor K. N. C. Bray,
University of Cambridge, U.K.

Dr. H. H. Chiu,
National Cheng-Kung University, Taiwan

Dr. J. Chomiak,
Chalmers University of Technology, Sweden

Professor P. Clavin,
Université de Provence, France

Professor John W. Daily,
University of Colorado, U.S.A.

Professor G. Faeth,
University of Michigan, U.S.A.

Professor M. Frenklach,
Pennsylvania State University, U.S.A.

Professor I. Glassman,
Princeton University, U.S.A.

Professor J. Heywood,
Massachusetts Institute of Technology, U.S.A.

Professor C. K. Law,
Princeton University, U.S.A.

Professor A. H. Lefebvre,
Purdue University, U.S.A.

Professor W. Leuckel,
Universität Karlsruhe, Germany

Professor Elaine S. Oran,
Naval Research Laboratory, U.S.A.

Professor S. S. Penner,
University of California, U.S.A.

Professor A. F. Sarofim,
Massachusetts Institute of Technology, U.S.A.

Professor R. Sawyer,
University of California, U.S.A.

Professor M. Sichel
University of Michigan, U.S.A.

Professor William Sirignano,
University of California, U.S.A.

Professor Douglas L. Smoot,
Brigham Young University, U.S.A.

Professor Gerard deSoete,
Institut Français du Petrole, France

Professor H. Tsuji,
Saitama University, Japan

Professor Dr. H. Gg. Wagner,
Max-Planck-Institut für Strömungsforschung, Germany

Professor Forman A. Williams,
University of California, U.S.A.

Subscription Rates 1993

Annual Institutional Subscription Rate (1993): £315.00 (US$504.00). Sterling prices are definitive. US dollar prices are quoted for convenience only, and are subject to exchange rate fluctuation. Prices include postage and insurance and are subject to change without notice. Subscription rates for Japan are available on request.

Specially Reduced Rates to Individuals:
Any individual whose institution takes out a library subscription may purchase a second or additional subscription for personal use at a much reduced rate.

Members of the Combustion Institute can purchase a subscription at a rate of £50.00 (US$80.00).

Subscription enquiries from customers in North America should be sent to Pergamon Press Inc., 660 White Plains Road, Tarrytown, NY 10591-5153, U.S.A., and for the remainder of the world to Pergamon Press Ltd, Headington Hill Hall, Oxford OX3 0BW, U.K. Single back volumes and parts are available.

Second class postage paid at RAHWAY, NJ. Postmaster send address corrections to *Progress in Energy and Combustion Science*, c/o Pergamon Press Inc., 660 White Plains Road, Tarrytown, NY 10591-5153, U.S.A.

Back Issues

Back issues of all previously published volumes are available direct from Pergamon Press offices.

Progress in Energy and Combustion Science is published bimonthly (February, April, June, August, October, December). At the end of the year the Subscriber will receive, free, the annual subject index.

CONTENTS

The electrodynamic chamber: a tool for studying high temperature kinetics involving liquid and solid particles 1
E. BAR-ZIV and A. F. SAROFIM

Modelling fire spread through fuel beds 67
R. O. WEBER

Wind effects on fires 83
W. M. PITTS

The transition to nonsteady deflagration in gasless combustion 135
S. T. MARGOLIS

Combustion processes in diesel engines 163
T. KAMIMOTO and H. KOBAYASHI

Shock tube studies of gas phase reactions preceding the soot formation process 191
R. D. KERN and K. XIE

Optical imaging of sprays 211
N. CHIGIER

Nitramine propellant ignition and combustion research 263
M. H. ALEXANDER *et al.*

Comminution of carbons in fluidized bed combustion 297
R. CHIRONE, L. MASSIMILLA and P. SALATINO

Gaseous detonations — a selective review 327
B. E. GELFAND, S. M. FROLOV and M. A. NETTLETON

Fundamentals of coal combustion during injection into a blast furnace 373
W. P. HUTNY, G. K. LEE and J. T. PRICE

Other Pergamon Titles of Interest

SUBJECT INDEX

Acetaldehyde, pyrolysis of 201
Acetylene, pyrolysis of 197
Acyclic fuels, pyrolyses of 196
Allene, pyrolysis of 199
Aromatic fuels, pyrolyses of 202
Atomic resonance absorption spectrometry (ARAS) 194
Attrition. *See under* Carbon comminution of fluidized bed combustion

Benzene, pyrolysis of 202
Benzyl radical, pyrolysis of 205
Blast furnace
  coal combustion in 373
  coal quality 391
  coal type 388
  combustion conditions 377
  direct reduction 374
  effects of temperature, pressure and oxygen content 390
  factors affecting coal combustion 377
  idealized process 375
  indirect reduction 374
  location of injection point 387
  mathematical models of coal and coal/coke combustion 392
  mechanisms of coal combustion 378
  outline of process 374
  particle size effects 390
  reduction reactions 374
  solution loss reaction 374
  stoichiometric ratio/injection rate 389
  thermal regime 376
1,2-butadiene, pyrolysis of 200
1,3-butadiene, pyrolysis of 200

Cameras 215
  35 mm 215
  35 mm Pentax Super A 224
  AMP4 technical 220
  depth of field 215
  high magnification 215
  intermittent pin-registered 231
  motion-picture 231
  plate 215
  rotating prism 231
  streak 232
  ultrahigh-speed 232
Carbon comminution in fluidized bed combustion 297
  accounting for phenomena in 322
  attrition 314
    combustion-assisted 318
    interaction between combustion and 321
    mechanical 318
    models 320
    properties of fines 318
  fragmentation by percolation 312
  loss of efficiency due to comminution phenomena 324
  particle size population balance
    with secondary fragmentation 323
    without secondary fragmentation 323
  percolative fragmentation models 313
  phenomenology of 299
  primary fragmentation 301
    models 304
  secondary fragmentation 308
  series–parallel phenomena 299
Char combustion 387
Chemi-ionization in pyrolytic and oxidative reaction systems 206
Chemical developers 226
Coal
  bituminous 382
  devolatilization 380
    electrodynamic chamber (EDC) 59
  pyrolysis
    behavior 382
    electrodynamic chamber (EDC) 59
  subbituminous 382
  thermal decomposition 380
  see also under Blast furnace
Coal combustion
  gas phase 384
  heterogeneous gas–solid reactions 386
  ignition 384
  in blast furnace 373
  maceral composition 390
  mixing process in 383
  soot formation in 383
  tar formation in 382
Coal particles, primary fragmentation in batch-wise fluidized combustors 301
Combustion synthesis 137

Data analysis, imaging-type systems 251
Densitometry 228
Developing agents 226
Diesel engine combustion
  air motion 167
  alcohol fuels 182
  alternative fuels 182
  effects of engine parameters 177
  effects of fuel quality 179
  flame structure 172
  hydrocarbon emissions 179
  hydrogen fuels 183
  ignition delay 170
  low heat rejection engines 180
  particulate emissions 179
  performance and emissions 176
  premixed and diffusion combustion 172
  spontaneous ignition 170
  spray phenomena 164
Double flash system for velocity measurement 224
Droplet detection and focus measurement 249
Droplet images 214
Droplet size measurement
  image processing 252
  optical imaging for 247
Droplet sizing, for holography 238
Droplet velocity measurement, image processing 252

Electrodynamic chamber (EDC) 1
  AC field 6

adsorption–desorption 56
advantages and drawbacks 61
ambient temperature experiments 56
angular light scattering 24
char burning rates 60
charge loss 53
charge measurements 18
coal devolatilization 59
coal pyrolysis 59
continuous electron loss 20
data simulation by analog computer 17
difficulties 48
direct optical size measurements 24
elastic light scattering 24
electrodes 6
electrodynamic field 6
electron stepping 19
equation of motion 9
evaporation/condensation 56, 59
fast Fourier transform 17
gas analysis 47
heat capacity measurements 44
heating by radiation 27
heating rates 32
high temperature applications 56
high temperature experiments 59
hyperboloidal configurations 6
imposed flow 22
imposed voltage change 21
instability regions 12
intermediate temperature experiments 57
internal and overall absorption 27
internal temperature distributions 31
motion of particle within 7
natural convection 50
operation 5
optical pyrometry 35
overview of 5
particle motion measurements and position control 13
particle spectroscopy 45
phase transition, evaporation and decomposition studies 61
photodiode array shadowgraphy 14
photophoresis 48
surface area measurements 43
surface char oxidation 57
temperature control 33
thermophoresis 50
trajectory analysis methods 16
video photography 13
weight and size measurements 21
Electronic fuel injection, laser imaging system for 258
Ethylbenzene, pyrolysis of 204
Ethylene, pyrolysis of 196
Ethylene oxide, pyrolysis of 201

Fire spread modeling through fuel beds 67
classification and summary of models 69
empirical models 70
flame 69
fuel bed characteristics 68
heat transfer 69
ignition temperature 69
incorporating kinetics 80
physical models 70, 73
physical problem 68
refinements 79
statistical models 69
Fires
conflagrations 85
fire properties in ambient wind 107
fire property measurements, correlations, and theoretical treatments 99
fire spread 96, 111
in absence of wind 97
in presence of wind 100
urban, current models to predict 123
fire storms 85
fire whirls 112
firebrands 111
flame merging 115
interactions of multiple fires 115
Japanese research 86
mass fires 84, 85
nuclear detonation 84, 87, 88, 120
deterministic modeling of urban fire spread 92
distribution of significant fire starts 91
distribution of thermal radiation 91
fire spread between structures 91
fire storms 94
growth of fires in buildings 91
mass fire behavior 94
stochastic modeling of urban fire spread 92
reduced-scale studies 126, 128
role of turbulence in wind-aided fire spread 128
role of turbulent boundary layer in fire spread rate and behavior 119
similarity analysis and fire behavior 124
similarity analysis and fire spread 125
synergistic effects of multiple nuclear detonations 122
urban 84, 86, 88
urban mass fire history 87
U.S. research 86
wind-aided urban fire spread, laboratory-scale experiments 124
wind-blown fires, models 109
wind effects on 83
wind–fire interactions
during urban mass fires and research needs 120
in urban fires 126
Fixing 227
Flash-photolysis shock tube (FPST) technique 196
Flash units 216
Flow holography 242, 243
Fluidized bed combustion, carbon comminution in 297
Fourier transforms 239
data reduction by 240
Fraunhofer diffraction analysis technique 240
Fuel beds, fire spread modeling. *See* Fire spread modeling through fuel beds
Fuel sprays, spark photography of 219

Gas phase reactions, preceding soot formation process 191
Gaseous detonations 327
comparison of experimental data with non-ideal unidimensional theory 347
critical pipe diameter 339
determination of momentum losses from shock attenuation 336
diffraction of detonation at abrupt increase in area 361
dust clouds 352
experimental techniques 352
galloping waves 360
in presence of evaporating particles 344
in suspension of inert particles 343

influence of wall roughness on detonation velocity 339
initiation and origin of structure 360
interactions of wave structure with changes in confinement 361
ionisation methods 356
mechanisms in rough tubes 329
methods of reducing and rendering more uniform local pressures 362
momentum and heat losses 334
non-ideal 329
optical methods 354
real detonation fronts 357
reflection of detonation waves 363
soot track method 353
theoretical considerations 332
unidimensional models 358
use of rings and gauges 353
wave systems created by diffraction of shocks in inert media and their relationship to detonation 357
with homogeneous and boundary layer ignition 337
Gasless combustion
asymptotic model 140
basic solution and linear stability 141
bifurcation of pulsating and spinning waves 143
chaotic combustion 156
governing equations 138
new models 160
resonance phenomena 149
secondary bifurcation and quasi-periodic combustion 145
terminology 136
transition to nonsteady deflagration 135
Grain and graininess 229

Halation 229
Heat transfer, fire spread through fuel beds 69
High-speed cinematography 231
High-speed microphotography 222
Holocameras 236
high-speed multi-pulse ruby laser 242
Holograms 235
analysis of 259
automated analysis 240
recording and reconstruction 241
thermoplastic devices 244
Holography 214, 234
droplet sizing by 238
flow 242, 243
particle field 238
particle sizing 243

Image analysis, automatic 244, 253
Image analysis computers 244
Image characteristics 229
Image enhancement and filtering techniques 257
Image forming 213
Image processing 253
droplet size and velocity measurement 252
nonspherical particles 256
Image relief 229
Imaging techniques, erroneous results 214

Laser extinction measurements 192
Laser imaging system 260
for electronic fuel injection 258
Laser schlieren densitometry 193
Latent image formation 226
Lateral dimensional stability 230
Lighting arrangements 216

Mathieu equation 9
Microphotography 216
Mixing process in coal combustion 383
Modulation transfer function (MTF) 227

Nitramine propellant ignition and combustion research 263
critical laboratory signatures 291
critical parameter identification of statistical error analysis 291
critical problems and challenges 265
diagnostics 282, 286
emerging role of theoretical chemistry 274
evaluated data bases 288
extension of chemistry models 271
extension of sensitivity gradient concepts to electronic structure level 292
fundamental chemistry and physics of 268
global sensitivity analysis 292
hierarchical research structure 267
identification of key parameters 290
improved models and supporting theory 271
improvement of energy and mass transport models 277
improvement of kinetic rate parameters 273
improvement in thermochemical data 277
kinetic techniques and experiments 287
laboratory experiments 281
lumped model identification 291
macroscale combustion experiments 281
measured and evaluated rate data 273
model approaches 268, 270
model reduction and lumping 279
model upgrades 278
new tools and new directions 267
overview 265
previous review efforts 264
problem background 264
relation to other problems 267
sensitivity analysis 267
as critical cross-connection 289
spectroscopic diagnostics 284, 285
supporting laboratory experiments 284
validation of chemical reaction mechanisms 277

Optical imaging of sprays 211
Optical system for spark photography 219
Oxidative reaction systems, chemi-ionization in 206

Particle field holography 238
Particle kinetics. *See* Electrodynamic chamber (EDC)
Particle shape characterization 257
Particle sizing
comparison of measurements made by imaging and scattering instruments 260
holography 243
Percolation. *See under* Carbon comminution in fluidized bed combustion
Phase Doppler system 260
Photographic emulsion 228
noise sources 230
reciprocity law 229
resolving power 230

Photographic films 224
Photographic materials 225
Photographic process 212
Photographic processing 228
Photosensitive emulsion 225
Pulsed fuel injection 242
Pyridine, pyrolysis of 205
Pyrolyses
  of acyclic fuels 196
  of aromatic fuels 202
Pyrolysis, chemi-ionization in 206

Raceway adiabatic flame temperature (RAFT) 373, 376
Reciprocity law for photographic emulsion 229

Self-propagating high-temperature synthesis (SHS) 136, 137
Sensitometry 227
Shading correction 249
Shock tube techniques 191
Silver halide microcrystals 226
Single lens imaging system 213
Single pulse shock tube (SPST) technique 196
Soot formation process
  gas phase reactions preceding 191
  in coal combustion 383
Spark light sources 222
Spark photography
  of fuel sprays 219
  optical system for 219
Spray analysis, automated imaging 250
Sprays, optical imaging of 211
Stereoscopic cinematography 233
Still photography 215

Tar formation in coal combustion 382
Time-of-flight mass spectrometry 192
Toluene, pyrolysis of 203

UV absorption spectroscopy (UVAS) 195

Video processor system 260
Video Spray analyzer 247
Vinylacetylene, pyrolysis of 197
Visible absorption spectroscopy 195

Wind effects on fires 83

CONTENTS OF PREVIOUS VOLUMES

VOLUME 1

Pollution Formation and Destruction in Flames — Introduction
N. A. CHIGIER

The First Half-Million Years of Combustion Research and Today's Burning Problems
F. J. WEINBERG

Kinetics of Pollutant Formation and Destruction in Combustion
C. T. BOWMAN

Mathematical Modeling of Pollutant Formation
L. S. CARETTO

Mixing and Chemical Reaction in Continuous Combustion
D. T. PRATT

Turbulent Jet Diffusion Flames
R. W. BILGER

Gas Turbine Engine Pollution
A. M. MELLOR

Pollution Formation and Control in Spark-Ignition Engines
J. B. HEYWOOD

Analysis of Pollutant Formation and Control and Fuel Economy in Diesel Engines
N. A. HENEIN

VOLUME 2

NO_x Control for Stationary Combustion Sources
A. F. SAROFIM and R. C. FLAGAN

The Characterization and Evaluation of Accidental Explosions
R. A. STREHLOW and W. E. BAKER

Fluidized Bed Combustion of Coal for Power Generation
D. ANSON

Combustion and Heat Transfer in Large Boiler Furnaces
A. M. GODRIDGE and A. W. READ

The Atomization and Burning of Liquid Fuel Sprays
N. A. CHIGIER

Fossil Energy Research and Development in ERDA
P. C. WHITE

Flaring in the Energy Industry
T. A. BRZUSTOWSKI

Turbulence and Turbulent Combustion in Spark-Ignition Engines
R. J. TABACZYNSKI

Fundamentals of Oil Combustion
A. WILLIAMS

Geothermal Energy Development
H. C. H. ARMSTEAD

Combustion Fundamentals Relevant to the Burning of Natural Gas
P. F. JESSEN and A. MELVIN

VOLUME 3

The Use of Laser Raman Diagnostics in Flow Fields and Combustion
S. LEDERMAN

Gasification: Theory and Application
K. LITTLEWOOD

Non-Electrical Uses of Geothermal Energy
E. BARBIER and M. FANELLI

The Gas-Phase Oxidation of Hydrocarbons
G. MCKAY

Synthetic Fuels and Combustion
J. P. LONGWELL

Future Fuels and Mixture Preparation Methods for Spark Ignition Automobile Engines
W. BERNHARDT

Molecular Beam Mass Spectrometry for Studying the Fundamental Chemistry of Flames
J. C. BIORDI

Instrumentation Techniques for Studying Heterogeneous Combustion
N. A. CHIGIER

Current Status of Droplet and Liquid Combustion
G. M. FAETH

A Review of Drop Size Measurement — The Application of Techniques to Dense Fuel Sprays
A. R. JONES

Propagation of Laminar Pulverized Coal — Air Flames
L. D. SMOOT and M. D. HORTON

VOLUME 4

Laminar and Turbulent Gas Dynamics in Combustors — Current Status
R. B. EDELMAN and P. T. HARSHA

Nuclear Process Heat for Coal Gasification and Hydrogen Production
K. F. KNOCHE

Gas Turbine Engine Emissions — Problems, Progress and Future
R. E. JONES

Fifty Years of Combustion Research at General Motors
W. G. AGNEW

Combustion Noise
W. C. SRAHLE

Future Jet Fuel Combustion Problems and Requirements
W. S. BLAZOWSKI

Reducing Inefficiency and Emissions of Large Steam Generators in the United States
B. P. BREEN and J. G. SOTTER

Heterogeneous Kinetics of Coal Char Gasification and Combustion
N. M. LAURENDEAU

VOLUME 5

Mineral Matter in Coal and the Thermal Performance of Large Boilers
T. F. WALL, A. LOWE, L. J. WIBBERLEY and I. McC. STEWART

Coal Dust Flames: A Review and Development of a Model for Flame Propagation
JOHN L. KRAZINSKI, RICHARD O. BUCKIUS and HERMAN KRIER

Scattering of Electromagnetic Radiation in Particulate Laden Fluids
A. R. JONES

Combustion Modeling in Two and Three Dimensions — Some Numerical Considerations
HENRY McDONALD

Phenomenological Models for Reciprocating Internal Combustion Engines
PAUL N. BLUMBERG, GEORGE A. LAVOIE and RODNEY J. TABACZYNSKI

Research and Development by British Gas into the Effective Use of Gas in Industry
M. L. HOGGARTH

***In Situ* Combustion Retorting of Oil Shale**
MELVYN C. BRANCH

Basic Considerations in the Turbulent Flame Propagation in Premixed Gases
JERZY CHOMIAK

Particulate Formation in Power Station Boiler Furnaces

Nitric Oxide Formation from N_2 in Flames: The Importance of "Prompt" NO
A. N. HAYHURST and I. M. VINCE

The Trace Element Chemistry of Coal During Combustion and the Emissions from Coal-Fired Plants
R. D. SMITH

Unconfined Vapour-Cloud Explosions: Definition of Source of Fuel
D. J. LEWIS

Spread and Evaporation of Liquid
F. BRISCOE and P. SHAW

Methods for Predicting the Atmospheric Dispersion of Massive Releases of Flammable Vapour
R. A. COX

Unconfined Vapour-Cloud Explosions — Historical Perspective and Predictive Method Based on Incident Records
D. J. LEWIS

Risk Assessment Methods for Vapour-Cloud Explosions
L. CAVE

Catalysts for Automobile Emission Control
J. T. KUMMER

Fundamental Coal Combustion Mechanisms and Pollutant Formation in Furnaces
J. O. L. WENDT

The Hydropyrolysis of Coal to BTX
G. FYNES, W. R. LADNER and J. O. H. NEWMAN

Airblast Atomization
A. H. LEFEBVRE

Soot Control By Fuel Additives
J. B. HOWARD and W. J. KAUSCH, JR

A Review of Combustion Processes in the Dual Fuel Engine — The Gas Diesel Engine
G. A. KARIM

Post Combustion Methods for Control of NO_x Emissions
H. S. ROSENBERG, L. M. CURRAN, A. V. SLACK, J. ANDO and J. H. OXLEY

The Determination of Laminar Burning Velocity
C. J. RALLIS and A. M. GARFORTH

Perspectives for Metal Hydride Technology
H. BUCHNER

Semi-Empirical Correlations for Gas Turbine Emissions, Ignition and Flame Stabilization
A. M. MELLOR

The Mechanisms of Transition from Deflagration to Detonation in Vapor Cloud Explosions
J. H. S. LEE and I. O. MOEN

VOLUME 7

Detailed Modelling of Combustion Systems
E. S. ORAN and J. P. BORIS

Mechanisms of Heat Transfer Between a Surface and a Gas-Fluidized Bed for Combustor Application
S. C. SAXENA and J. D. GABOR

A Review of Initial Comparisons of Computed and Measured Two-Dimensional Unsteady Flame Fields
F. V. BRACCO and P. J. O'ROURKE

The Kinetics of Thermochemistry of Chemical Oxidation with Application to Combustion and Flames
S. W. BENSON

Product Formation Mechanisms Inside a Burning Cigarette
R. R. BAKER

Automotive Engines and Fuels: A Review of Future Options
J. B. HEYWOOD

Solar Cooling and Air Conditioning
G. GROSSMAN and A. JOHANNSEN

Soot Formation
B. S. HAYNES and H. GG. WAGNER

Fundamentals of Soot Formation in Flames with Application to Diesel Engine Particulate Emissions
O. I. SMITH

Multidimensional Numerical Simulation of Reactive Flow in Internal Combustion Engines
T. D. BUTLER, L. D. CLOUTMAN, J. K. DUKOWICZ and J. D. RAMSHAW

VOLUME 8

Modeling of Unsteady Two-Phase Reactive Flow in Porous Beds of Propellant
S. S. GOKHALE and H. KRIER

Flame Radiation
C. L. TIEN and S. C. LEE

Fuel Atomization for Spray Modelling
M. M. ELKOTB

Counterflow Diffusion Flames
H. TSUJI

Sunfuels
R. J. KING

Production and Use of Biogas in Agriculture
P. N. HOBSON and N. E. H. FEILDEN

Turbulent Hydrocarbon Jet Flames
H. EICKHOFF

Recent Advances in Droplet Vaporization and Combustion
C. K. LAW

Conditional Sampling in Turbulent Combustion
P. A. LIBBY, N. CHIGIER and J. C. LARUE

Liquid Fuels for Transport
E. M. GOODGER

Sulphate Capture in Ash and Boiler Deposits in Relation to SO_2 Emission
E. RAASK

Coal Gasification—Combined Cycles for Electricity Production
T. D. BROWN

Entrainment Interface in Free Turbulent Shear Flows

C. K. LAW

Laminar Diffusion Flamelet Models in Non-Premixed Turbulent Combustion
N. PETERS

Small Industrial-Scale Producer Gas Units
A. BLIEK, W. P. M. VAN SWAAIJ and K. R. WESTERTERP

Pulverized-Coal Combustion Research at Brigham Young University
L. D. SMOOT, P. O. HEDMAN and P. J. SMITH

VOLUME 11

Dynamic Behavior of Premixed Flame Fronts in Laminar and Turbulent Flows
P. CLAVIN

Fuel Combustion in the Blast Furnace Raceway Zone
J. M. BURGESS

Theory of Normal Premixed Turbulent Flames Revisited
P. A. LIBBY

The Mode of Occurrence and Concentration of Trace Elements in Coal
E. RAASK

Pdf Methods for Turbulent Reactive Flows
S. B. POPE

Particulate Removal from High-Temperature, High-Pressure Combustion Gases
S. C. SAXENA, R. F. HENRY and W. F. PODOLSKI

Chemical–Acoustic Interactions in Combustion Systems
E. S. ORAN and J. H. GARDNER

Modeling of Smoldering Combustion Propagation
T. J. OHLEMILLER

Non-Ideal Equations of State for Combusting and Detonating Explosives
S. Y. WANG, P. B. BUTLER and H. KRIER

VOLUME 12

The High-Temperature Oxidation of Aromatic Hydrocarbons
K. BREZINKSY

Catalytically Stabilized Combustion
W. C. PFEFFERLE and L. D. PFEFFERLE

Pulse Combustion
A. A. PUTNAM, F. E. BELLES and J. A. C. KENTFIELD

A Survey of Recent Studies on Flame Extinction
J. JAROSINSKI

The Mode of Occurrence and Combustion Characteristics of Chlorine in British Coal
W. C. PEARCE and J. W. F. HILL

Modeling of Swirl in Turbulent Flow Systems
D. G. SLOAN, P. J. SMITH and L. D. SMOOT

Turbulent Reacting Flows
A SPECIAL ISSUE PREPARED BY A COMMITTEE FOR THE UNITED STATES AIR FORCE OFFICE OF SCIENTIFIC RESEARCH

VOLUME 13

Internal-Combustion Engine Heat Transfer
G. BORMAN and K. NISHIWAKI

The Structure of Small-Scale Turbulence and its Effect on Combustion in Spark Ignition Engines
H. DANESHYAR and P. G. HILL

Cool Flames
P. G. LIGNOLA and E. REVERCHON

Radiation Heat Transfer in Combustion Systems
R. VISKANTA and M. P. MENGÜC

Thermokinetic Interactions: Fundamentals of Spontaneous Ignition and Cool Flames
J. F. GRIFFITHS and S. K. SCOTT

Chemical Kinetics in the Combustion Processes: a Detailed Kinetics Mechanism and its Implementation
V. YA. BASEVICH

Computational Models and Methods for Continuous Gaseous Turbulent Combustion
S. M. CORREA and W. SHYY

Mixing, Transport and Combustion in Sprays
G. M. FAETH

VOLUME 14

Theory of Combustion Waves in Homogeneous Media
A. G. MERZHANOV and B. I. KHAIKIN

Laser Doppler Velocimetry Investigation of the Turbulence Structure of Axisymmetric Diffusion Flames
J. P. SISLIAN, L.-Y. JIANG and R. A. CUSWORTH

Temperature Measurements by Light-Scattering Methods
N. M. LAURENDEAU

Particle Mixing in Free Shear Flows
C. T. CROWE, J. N. CHUNG and T. R. TROUTT

Free Convection Diffusion Flames from Burning Solid Fuels
M. SIBULKIN

Hazard Initiation in Solid Rocket and Gun Propellants and Explosives
A. M. MELLOR, T. L. BOGGS, J. COVINO, C. W. DICKINSON, D. DREITZLER, L. B. THORN, R. B. FREY, P. W. GIBSON, W. E. ROE, M. KIRSHENBAUM and D. M. MANN

Turbulent Combustion Modelling
R. BORGHI

Effects of Turbulence on Dust Explosions
P. R. AMYOTTE, S. CHIPPETT and M. J. PEGG

VOLUME 15

Model-free Simulations of Turbulent Reactive Flows
P . GIVI

Combustion of Low Calorific Value Gases; Problems and Prospects
J. CHOMIAK, J. P. LONGWELL and A. F. SAROFIM

Calculations of Droplet Dynamics in High Temperature Environments
H. A. DWYER

Negatively Buoyant Wall Flows Generated in Enclosure Fires
Y. JALURIA and L. Y. COOPER

Hypersonic Propulsion
S.-I. CHENG

Selective Diffusional Demixing: Occurrence and Size of Cellular Flames
M. HERTZBERG

Fast Flames, Waves and Detonation
J. F. CLARKE

Mechanism of Soot Initiation in Methane Systems
M. WEISSMAN and S. W. BENSON

Mechanism and Modeling of Nitrogen Chemistry in Combustion
J. A. MILLER and C. T. BOWMAN

VOLUME 16

Characteristics of Commonly-used U.S. Coals—Towards a Set of Standard Research Coals
K. L. SMITH and L. D. SMOOT

Devolatilization and Combustion Characteristics of Coal Particles
S. C. SAXENA

Scavenging the Two-stroke Engine
E. SHER

Rate-controlled Constrained-equilibrium Theory of Chemical Reactions in Complex Systems
J. C. KECK

A Review of Experimental Studies of Knock Chemistry in Engines
T. A. LITZINGER

Fireside Corrosion in PC-fired Boilers
J. N. HARB and E. E. SMITH

A Special Issue on Ash Deposition
